

## Climate Change (Pre-Show)

Objective: Learn about climate change and what can be done to stop it.

Materials: Chart paper, markers.

### Directions:

1. Take students out into the local environment. Having the opportunity to compare the local environment surrounding the school with environments less-impacted by human activity is ideal. Guidance from someone connected to the local environment is also beneficial for students. Many First Nations have elders or knowledge keepers who have expertise in the history and current conditions of the local environment and the many uses of native species.

2. Write students' answers to the following questions on the chart paper and save it for a further activity after the show.

### Questions

- Your Environment
  - What is your environment?
    - Temperature?
    - Food?
    - Water?
    - Shelter?
    - Is it safe?
  - How do you feel about your environment?
  - How do you interact with your environment?
  - Why might your environment be that way?
- What can change the environment?
  - What do you know about climate change? (Write answers down on chart paper)
  - How could climate change affect our planet?
